**FRAME TYPE**

SOLARA3G Solara 3G Tilt-in-Space Wheelchair \$3,900

*300lb standard weight. A seating system must be purchased for use with this wheelchair. No seating system is provided.*

**CUSTOM PACKAGES**

HDPG Heavy Duty Package (400 lb. capacity) \$601

*Reinforced axles and crossbraces. Weight limit of 400 lbs.*

**\*TRANSPORT TIE-DOWN**  
 TRRO includes four factory-installed transport brackets and a wheelchair anchored pelvic belt. TRRO has been crash-tested in accordance with ANSI/RESNA WC Vol 1. Section 19 Frontal Impact Test requirements for wheelchairs with a 168 lb crash dummy, which corresponds to a person with a weight of 114 lbs to 209 lbs.  
 TRBKTS includes four factory installed wheelchair transport brackets. TRBKTS has not been crash-tested in accordance with WC19. Use these transport brackets only to secure an unoccupied wheelchair during transport.  
 As of this date, the Department of Transportation has not approved any tie-down systems for transportation of a user while in a wheelchair, in a moving vehicle of any type. It is Invacare's position that users of wheelchairs should be transferred into appropriate seating in vehicles for transportation and use be made of the restraints made available by the auto industry. Invacare cannot and does not recommend any wheelchair transportation systems.  
 \* Transport Tie Down option is not retrofittable to existing models and is not field serviceable.

**TRANSPORT TIE DOWN**

*Transport Tie-Down options not retrofittable to existing models, not field serviceable. The only arms available for TRRO are TAD and TAF.*

TRRO Transport Ready Option\* \$416

**Tilt Assist Explained**

The Solara® 3G wheelchair is shipped from the factory pre-configured with one of three "Tilt Assist" settings: *Front, Mid or Rear*, based solely on the seat depth range and seat depth ordered. This setting describes how the user's weight is distributed on the frame itself, i.e., does one front load the chair, rear load or is the weight evenly distributed. As compared to the 2G, the 3G requires up to 30% less force needed to tilt because of these settings. If factors other than seat depth or seat depth range come into play that affect the weight distribution of the chair, the provider has the ability to change the Tilt Assist setting in the field by simply adjusting 2 screws on each side of the frame.

Tilt Assist Factory Setting		
	Seat Depth Range 15" - 19"	Seat Depth Range 18" - 22"
D15	Front Setting	
D16	Front Setting	
D17	Mid Setting	
D18	Rear Setting	Front Setting
D19	Rear Setting	Front Setting
D20		Mid Setting
D21		Rear Setting
D22		Rear Setting

*The factory setting may need to be adjusted if a seating system is added. The factory setting does not account for conditions outside of the seat depth and seat depth range which may cause more weight to be distributed to the front or back of the chair.*

When adjusting the Tilt Assist there are 4 bolts to change (2 on each side.) See the illustration to the left and chart above.

The **Rear** setting has the rocker tube telescoped entirely into the seat frame support tube where the adjustment bolt is in the bottom hole. Along the base frame the bolt is in the top hole. (e.g. accommodates a seat depth that is in the highest end of the seat depth range)

For the **Mid** setting the adjustment bolt is simply in the middle hole along the rocker tube which telescopes out and the middle hole along the base frame. (e.g. optimal for a seat depth in the middle of the seat depth range)

The **Front** setting has the bolt in the top hole of the rocker tube which is fully telescoped out of the seat frame support tube and in the bottom hole along the base frame. (e.g. accommodates a seat depth in the lowest end of the seat depth range)
