SEAT DEPTH RANGE SETTINGS

Note: NXT has 4" of depth adjustment for growth. Depth is measured from front of back post to end of the seat frame. For back post location add seating / hardware thickness (typically 2") to client's actual seat depth.

Example: seat depth of 12" + back / hardware thickness of 2" = back post location set at 14"

Note: Extensions may limit tilt range and may affect stability when in tilted positions. Adjusting seat rail location will compensate for tilt range limitations and possible instability.
